Advanced AR-15 Armorer Course

The student law enforcement officer will be supplied with a loaner AR-15 type carbine and a tool kit that allows for complete disassembly, reassembly, and functional review of this rifle system. Beyond the standard armorer issues of the one-day basic class, the instruction will also include gas tube and barrel removal and replacement, stock, buffer tube removal and replacement, and a full explanation of the lower receiver fire control group and upper receiver and component parts.

Students may bring their own rifle/carbine for inspection and comparison, but the class will use the factory rifles for the instructional issues, unless otherwise authorized.
